BlackBoard auto login

I wrote this script STRICTLY for EDUCATIONAL PURPOSES and I am NOT RESPONSIBLE for any non-disciplinary action commited by its users

Install nodejs

- Download and install nodejs for your OS from https://nodejs.org/en/

Create a directory

- Create a directory and copy all the given files to that directory

Create a .env file

- Create an empty **.env** file on the root of the newly created directory.
- Write the flowing lines of code into the **.env** by providing the required credentials
  UID=
  PASSWORD=

Terminal

- Open terminal and change the current directory to the newly created directory

- Type **npm install** on the terminal and press ENTER

- Give some time it will install all the required dependencies and dev-dependencies from package.json

- Type **node index.js** and press ENTER and voila ,you're in your class.

PS:- It's recommended that you don't interact with the browser window while it's connecting but, meh. Do what you want !
